

Supplemental Materials: Cultural Cognition, Environmental Orientation, and Pro-Environmental Behavior

These supplemental materials report the single-orientation structural equation models — cultural cognition predicting the Connectedness to Nature Scale (CNS) and the New Ecological Paradigm (NEP) separately — and the associated mediation analysis. The combined model that integrates both orientations is reported in the main text.

Single-orientation structural models

Table 1: Model fit statistics for the CNS and NEP single-orientation structural equation models

Model	N	df	Chi-sq	RMSEA	RMSEA 90% CI	CFI	TLI	SRMR
CNS	501	100	227.27	0.050	[0.042, 0.059]	0.954	0.937	0.049
NEP	501	100	371.14	0.074	[0.066, 0.082]	0.911	0.879	0.067

Full combined model with measurement detail

The main text reports the structural portion of the full combined model (cultural cognition → NEP → CNS → behavior, with direct paths). Figure S3 shows the same model with the full measurement model — the latent constructs and their indicators — included.

Mediation analysis

Figure 1: Measurement and structural model of cultural cognition, the Connectedness to Nature Scale, and public and private pro-environmental behaviors. Standardized coefficients shown; * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.

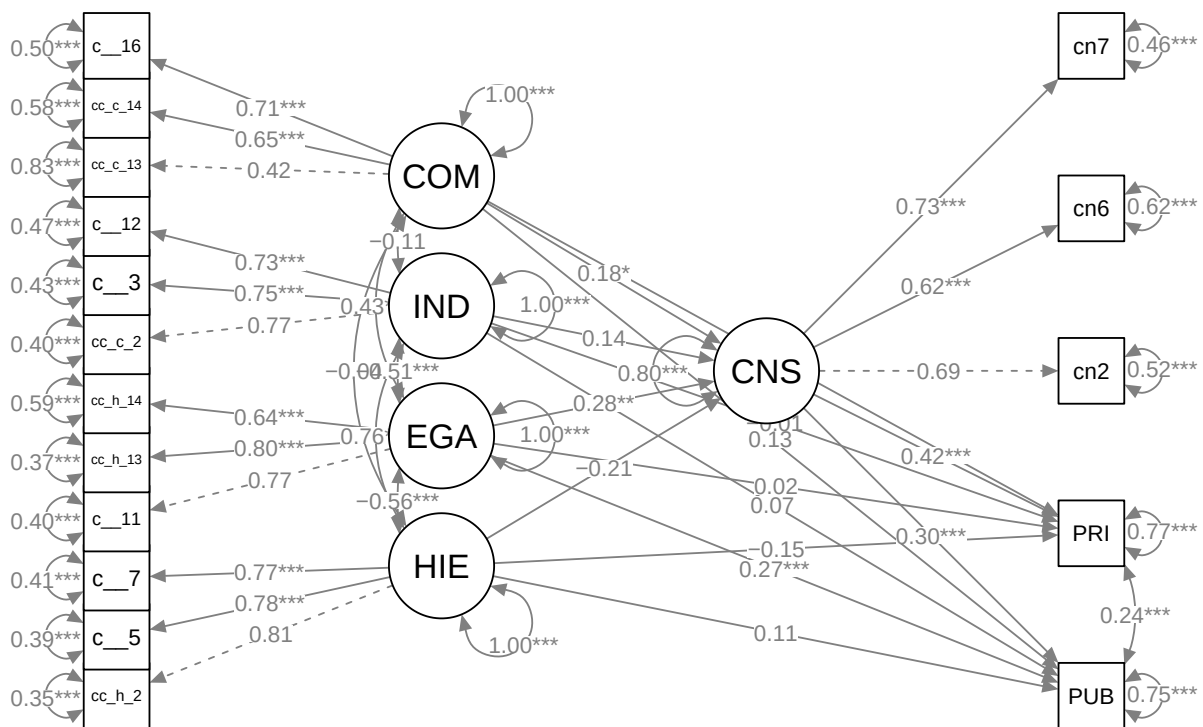

Figure 2: Measurement and structural model of cultural cognition, the New Ecological Paradigm, and public and private pro-environmental behaviors. Standardized coefficients shown; * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.

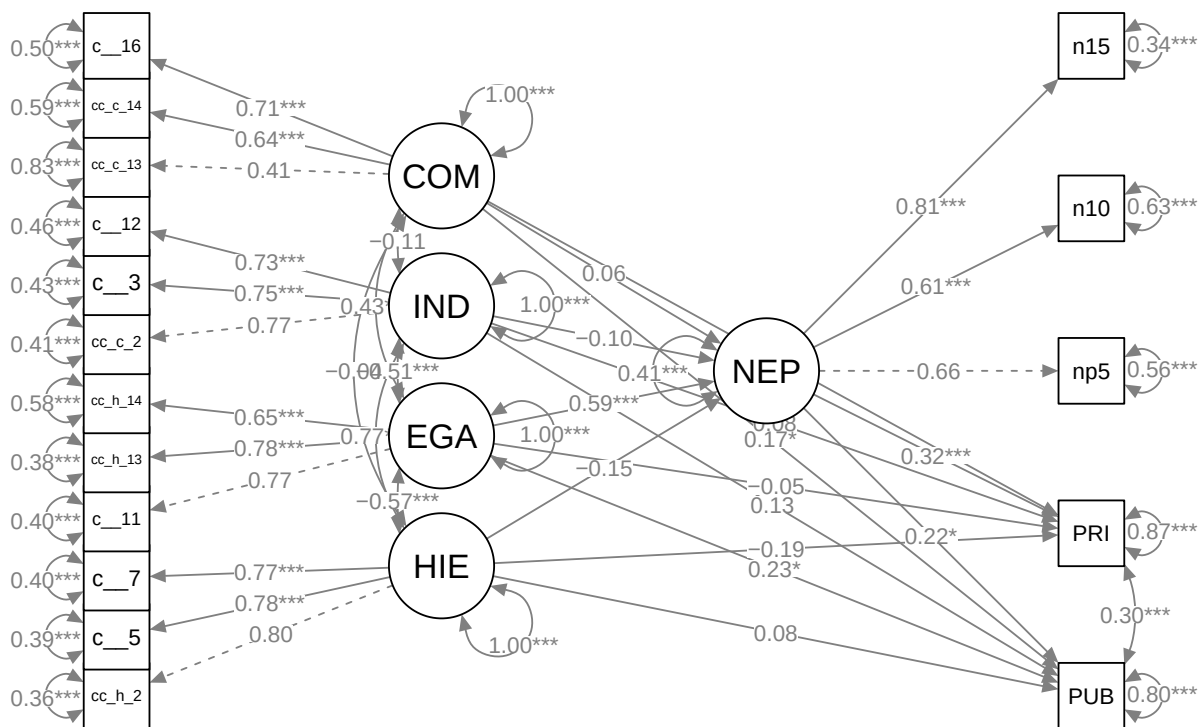

Figure 3: Full combined model including the measurement model (latent constructs and their indicators) and the structural paths: cultural cognition → New Ecological Paradigm → Connectedness to Nature → public and private pro-environmental behavior, with direct paths. Standardized coefficients shown; * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.

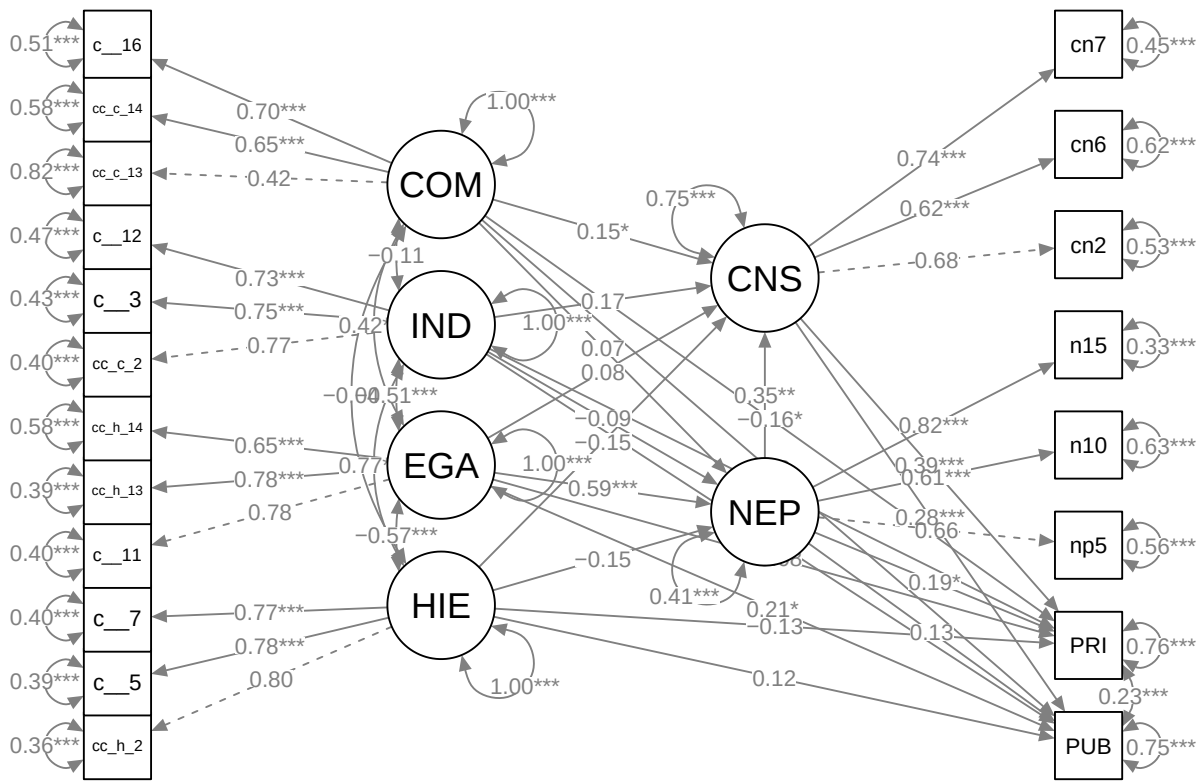

Table 2: Mediation analysis: standardized direct, indirect, and total effects of cultural cognition on public and private pro-environmental behavior († $p < 0.10$, * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$)

Path	Outcome	Direct	Indirect	Total
Egalitarianism → CNS	Public	0.271***	0.085**	0.356***
Egalitarianism → CNS	Private	0.017	0.120**	0.137†
Communitarianism → CNS	Public	0.128*	0.054*	0.182**
Communitarianism → CNS	Private	-0.159*	0.076*	-0.083
Egalitarianism → NEP	Public	0.229*	0.131*	0.360***
Egalitarianism → NEP	Private	-0.051	0.191**	0.139†
Communitarianism → NEP	Public	0.167**	0.014	0.182**
Communitarianism → NEP	Private	-0.105	0.021	-0.085
